# Plant Our Quicker.

## Pecans for Future Money Crops

You Should Get a Fine, Fruit-Bearing Orchard in 2 to 4 Years With Our Better-Rooted Trees

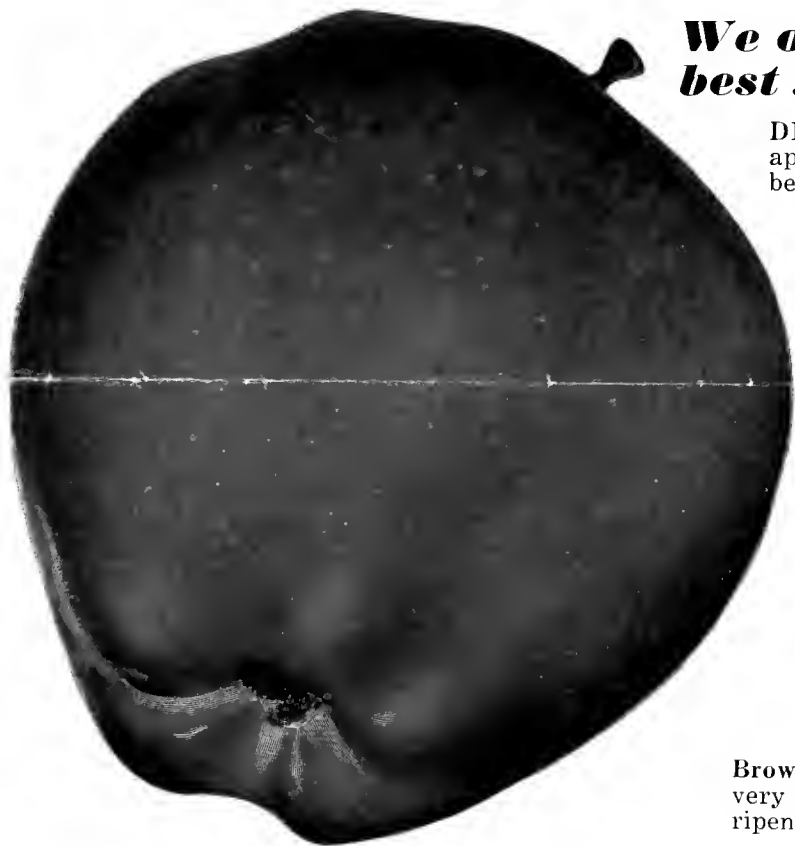

FOR 24 years we have been building a reputation among buyers of our pecan trees, as growers of the best root systems known. Those who bought our pecan trees have been so enthusiastic about them, they have frequently asked us to supply their fruit trees.

For a number of years we have owned and controlled several hundred acres of peach orchards and nurseries. More recently we have added a complete line of fruit

trees, English and black walnuts, figs, grapes, etc. The nursery stocks we grow have been budded or grafted from vigorous, heavy-bearing stock. The root-systems we grow have given our trees a well-merited reputation for growing off more quickly, and for fruiting earlier than the average nursery stock. Hundreds of our customers say our trees bear from one to three years earlier than most nursery trees.

We Furnish Dependable Instructions for the Planting and Care of Our Trees, with Each Order

We offer you six of the **APPLES**... for the best standard varieties **Southwest**

### PEARS

**Kieffer.** Best variety for the Southwest; large; yellow, rusty cheek; fine for cooking and market. Ripens in October.

**Garber.** Oriental strain, like the Smith's fruit, resembles Kieffer in size, shape and color. Ripens three weeks before Kieffer.

**Chinese Sand.** Called the "Pineapple Pear." Valuable for the South for canning. Flesh coarse, about the quality of Kieffer. Tree good grower, not subject to blight; good bearer. Ripens in August. Best suited to that section within 100 to 150 miles of the Gulf Coast.

**Bartlett.** Everyone is acquainted with this large yellow pear. Fruit very rich and highly aromatic—that's why

**DELICIOUS.** Beautiful red-striped winter apple. Good quality, fine flavor. One of best known and best liked apples. Every home should have a few.

**EARLY HARVEST.** Medium; bright straw color; tender; sub-acid; fine dessert and cooking apple. Must be handled carefully for market.

**RED JUNE.** One of best early apples for table and market. Medium; deep red; flesh white, crisp, excellent. Ripens in June.

**YELLOW TRANSPARENT.** Widely known, well liked; large size; transparent yellow; quality good, crisp sub-

acid, very fragrant. Excellent cooker. Fruit tender, requires careful handling. Tree bears young; rather dwarfish growth. Extremely hardy. Ripens in June.

**WINESAP.** One of oldest American apples still increasing in favor. Its size, color and particularly its quality have given it the well deserved popularity it enjoys. Medium size, vivid red, highly satisfying flavor. One of best keepers of all apples. All-purpose apple and a good one.

**GRIMES.** Good, golden yellow apple; an old favorite over the United States on account of beauty and size. Tree very productive, long lived; splendid for commercial planting and home orchards. Ripens in early fall.

### ENGLISH WALNUTS

**Franquette.** Large long pointed nuts, kernel sweet, rich and full. Regular bearer as it buds late in season.

**Wilson's Wonder.** Produces enormous size nuts, hardy; rough shell. Bears very young and heavily. Nuts bring fancy price.

### BLACK WALNUT

**Thomas.** Early and prolific bearing large thin shell nuts with kernels in halves. Adapted to nearly all types of soil and will grow in practically all parts of the United States. Trees very hardy.

WALNUT 2 to 3 ft. size, \$1.00 each. 10 or more \$ .80 each.  
PRICES: 3 to 4 ft. size, \$1.25 each. 10 or more \$1.00 each.

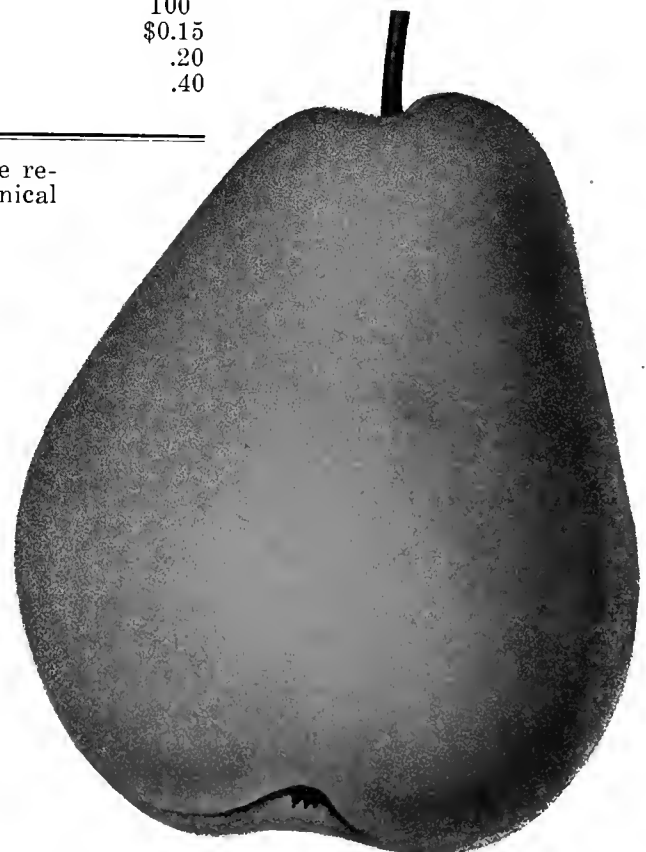

### PLUM-CHERRY

(Sometimes called Dwarf Cherry)

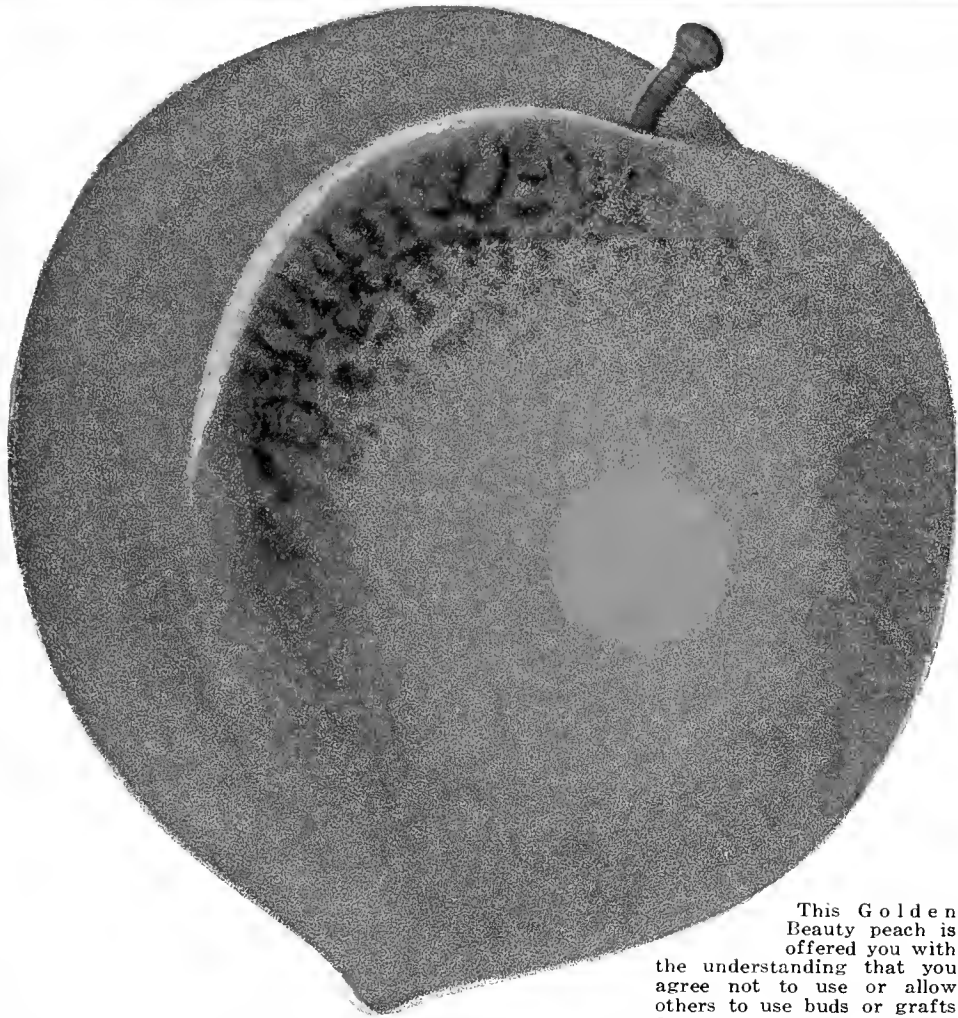

**Compass.** Cross between plum and cherry. Vigorous grower, prolific, hardy; bears early. Fruit dark red, rather small. Ripens in June. Should not be picked until ripe.

**Opata.** Fruit medium size, purplish-red, flesh greenish color with meat clinging to seed. Ripens last of June and first part of July. Trees are hardy and bear young.

PRICES—Same as Plum Tree Prices.

# Bearing Fruit Trees

This Golden Beauty peach is offered you with the understanding that you agree not to use or allow others to use buds or grafts from your trees.

## PEACHES ... OUR NEW FAMOUS ...

### GOLDEN BEAUTY PEACH

A large, yellow freestone peach, with a beautiful red cheek. Ripens from June 10 to 15, 3 weeks earlier than Elbertas. We have tested this peach for 10 years, and are convinced there is no other peach as good that ripens before the Elberta. It missed only two crops in 10 years. This peach has always sold readily and brought TOP market prices.

"Your Golden Beauty Peach arrives here when the demand is good. We sold this peach for \$2 per 1/3 bushel lug throughout the season, and could sell them that way as long as they last. We believe this early peach, being far superior in appearance, carrying qualities and taste . . . will always find a ready market."—GEO. A. REYDER CO., Commission Merchants, Galveston, Texas.

## 15 OUTSTANDING STANDARD VARIETIES OF PEACHES . .

**Red Indian.** Old-fashioned kind that's so good to eat, pickle and preserve. Ripens in August.

**Yellow Indian.** It is like the above except has yellow flesh.

**September Elberta.** A wonderful yellow freestone peach that ripens in September. Delicious flavor; ships well.

**Lemon Cling.** Medium size; yellow meat; clingstone. Ripens in most sections in August. Extra well suited for sweet pickles; nearly always makes a crop.

**Mayflower.** A "red-all-over" peach; handsome, splendid quality. Fine for home orchards, finds ready sale on the market. Should be in every home orchard. Ripens in May.

**Arp Beauty.** Yellow with bright red blush; firm, juicy and excellent peach of unusually good flavor; semi-cling. Ripens 1st of June.

**Mamie Ross.** Large, white, cling peach; red cheek. Ripens June 5 to June 15. Nice large peach that markets early and usually brings a good price.

**Hiley.** Ripens last of June; skin yellowish white, deep red cheek; flesh white, very juicy; medium size; freestone; prolific. Good shipper.

**Augbert.** A superb freestone, similar to Elberta, in many respects superior. Tree vigorous, prolific; very valuable. Ripens the middle of August.

**J. H. Hale.** Large size; yellow overlaid with bright carmine; flesh deep yellow; firm and fine grained; delicious flavor; freestone. Ripens in July.

**Old Mixon Cling.** Large, round, white with distinct red blush; flesh white, red next to seed, firm, of excellent quality. Adapted to nearly all sections where peaches grow. Ripens in August. Extra good for preserving and pickling.

**Early Wheeler.** Sometimes known as Red Bird Cling. Large fruit, clingstone, very beautiful clear creamy white. Very profitable for commercial orchards in practically all sections. Ripens last of May and first of June.

**Slappy.** Fruit when ripe is clear golden yellow, more conical shaped than other varieties. Freestone. Good commercial peach though not as heavy bearer as some other varieties. Ripens about July 1st.

**Elberta.** Most widely known of all peaches. Very attractive appearance; large; deep yellow, splashed crimson; perfect freestone. Ripens July 5th to 20th. Can be grown profitably in North, South, East and West. Tree very vigorous, highly productive.

**Stinson.** One of best late peaches. Large, oblong; white, red cheek; good flavor; clingstone. Ripens in October.

For 500 or more trees, write for special prices.

## JAPAN PERSIMMON

Japan persimmons are adapted to the South. They thrive in land suited to cotton. Trees subject to but very few diseases. Thrifty and very prolific.

**Tane-Nashi.** Fruit large to very large, roundish conical, seedless, color light orange-red with firm yellow flesh, an excellent shipper. Flesh astringent until soft.

2 to 3 foot size, each.....65c    3 to 4 foot size, each.....75c  
4 to 5 foot size, each.....85c

**Hiyakume.** Medium to large fruit; light orange color turning to brown when soft; roundish oblate with ends flattened. Sweet, meaty. Makes good growth; a free bearer.

**Eureka.** Medium-sized oblate tomato-shaped fruit. Originated in Texas; withstands rather severe drought conditions and low temperatures in winter. Ripens in November.

**America.** Successful plum anywhere. Bears very young and enormous crops. This wonderful plum should be in every orchard. Where there is no orchard there should be a few trees. It is as beautiful as a plum can possibly be—golden yellow with red cheek. Ripens about June 15.

**Burbank.** Extremely popular in all sections. Richly colored, red mottled, dotted with yellow. Heavy bearer. Ripens in July.

**Six Weeks.** Earliest of all plums. Large; oblong; bright red; flesh, pink; seed, small; upright; vigorous; prolific. Ripens May 20 to June 1.

**Gold.** Nearly transparent; golden yellow; wide range; sure bearer. Ripens last of June.

**Spraying.**—Oil Emulsion should be used as a spray to protect your fruit trees. Minimum order, 1 gallon.

Prices: 1 gallon...\$1.00    5 gallons...\$4.50    F. O. B. Tyler, Texas.

## PLUMS

## GRAPES

### Four Exceptionally Good Varieties

**Moore's Early.** Very large; early; black; fine quality; good market grape; very healthy, prolific.

**Carman.** One of most prolific and popular varieties; splendid for table or for wine, grape juice, preserves and jelly. Cluster very large; sometimes weighing 2 pounds; shouldered; very compact. Berries medium size, black with thin bloom. Skin tough, thin, never cracks, pulp meaty, firm but tender when fully ripe; splendid quality. Ripens in July.

**Concord.** Best known of all grapes; large, black, suited for table or market. Ripens in July.

**Niagara.** Large, greenish white; semi-transparent; quality good; a seedling of Concord; successful over a wide range of territory. Mid-season.

F. O. B. Tyler, Texas

## APRICOT

**Moorpark.** Deep yellow fruit, red blush on sunny side, flesh bright orange, freestone. Best variety for commercial purposes, fine for canning and drying. Tree vigorous, very prolific. Fruit ripens in June. Adapted to all sections Southwest.

PRICES—Same as Plum Tree Prices

# PLANT PECAN TREES

**NOW--Roots Must Set Before Trees Can Grow and Bear Nuts**

*Only a Few Years Required to Grow Papershell Pecans*

One of Our Own 7-Year Pecan Orchards with Peas for Fertilizer.

## How Our Better-Rooted Trees Grow in the West

"All the trees ordered from you last Spring put out growth in the Spring. Two died in late Fall before it began to rain. The Spring I ordered 110 pecan trees from another Texas nursery, and a tree died outright while 15 of them came out below the variety bud. I must say that I am well pleased with your trees."

J. W. BLAKE, Rule, Texas.

"The 150 trees bought of you 2 years ago are bearing this season (25 Texas Profitee trees). One just put out on 9/15/27."

J. M. WOODACK, White, Texas.

"All trees received from you are living and doing well."

J. BURNS, Weatherford, Texas.

"Of the number of Success trees purchased from you last year, we lost only one."

G. L. SMITH, S. D. Dep., of Agriculture, Dept. of AGRICULTURE, Ft. Worth, TEXAS, in 1921.

"I have a Burkett tree from you set 6 years ago. It has had 4 crops—a bushel or more in 1922."

R. L. OYER, Abilene, Texas.

"The 70 pecan trees bought of you last winter are all looking fine. Cotton is planted between the trees. My hay mulch about the trees protected them from this drought."

DR. T. F. GROSS, Lindsay, OKLA.

"The 4 pecan trees from you are doing well. We do not expect any trouble getting them to bear in a year or two."

G. E. BOKKIN, Director of Agriculture, Ft. Worth, TEXAS, in 1921.

"I have a Burkett tree from you set 6 years ago. It has had 4 crops—a bushel or more in 1922."

R. L. OYER, Abilene, Texas.

(These 4 trees were 60 days earlier—over 10,000 nuts.)

PECAN trees from our nurseries usually begin to bear from one to three years earlier than most nursery trees. There are several reasons for this. In 25 years of our cultivation methods, we have developed the best lateral-root system grown. These lateral or side roots, get most of the moisture. We grow our pecan trees here near the center of the world's largest pecan belt, where they are acclimated to your soil and weather conditions. We grow only those varieties best adapted to states west of the Mississippi River. Many trees sold by general nurseries and agents are brought from the East and Coast country, and

are not acclimated, usually having few lateral roots. They are often dry when they reach local nurseries or agents. Our trees are not dug until your order is received, and are shipped to you the same day they are dug. Each tree is dug separately to preserve its excellent root system. Our trees are kept moist from the time they are dug until you receive them. We are from 24 to 48 hours nearer you than eastern nurseries and you save money on express and freight rates. A pecan orchard planted now should begin to return some of your investment in a few years and about 15 acres of our papershell trees, properly cared for, should bring you an independent income after 10 or 15 years.

See W. G. Barnett's Statement Below

See J. A. Dewberry's Statement Below

## How Our Trees Thrive in the Eastern Zones

"From over 20 years of experience growing cotton and pecans, I am convinced that the trees you have sent me are the best adapted to pecans than from an acre of cotton. My 12 oldest trees produced 300 pounds in the 6th year—an average of 55 pounds each. My entire grove has produced as follows:

1925	299 lbs.	1926	2,622 lbs.	1927	1,912 lbs.
1928	1,328 lbs.	1929	1,341 lbs.	1930	1,312 lbs.
1931	1,328 lbs.	1932	1,341 lbs.	1933	1,312 lbs.
1934	1,328 lbs.	1935	1,341 lbs.	1936	1,312 lbs.
1937	1,328 lbs.	1938	1,341 lbs.	1939	1,312 lbs.
1940	1,328 lbs.	1941	1,341 lbs.	1942	1,312 lbs.
1943	1,328 lbs.	1944	1,341 lbs.	1945	1,312 lbs.
1946	1,328 lbs.	1947	1,341 lbs.	1948	1,312 lbs.
1949	1,328 lbs.	1950	1,341 lbs.	1951	1,312 lbs.
1952	1,328 lbs.	1953	1,341 lbs.	1954	1,312 lbs.
1955	1,328 lbs.	1956	1,341 lbs.	1957	1,312 lbs.
1958	1,328 lbs.	1959	1,341 lbs.	1960	1,312 lbs.

My oldest trees are now 20 years old."

M. D. TILSON, Texarkana, Texas.

"Enclosed are photographs of pecan trees bought of you. I have 250 acres of them, doing fine. If I were going to plant a million acres I would get every tree from you. And, your prices are always very reasonable."

J. A. DEWBERRY, Dallas, Texas.

"The 250 Pecan trees you shipped me are doing fine considering the severe winter conditions. One Spring frost killed every leaf and it did not get back until 8 weeks after all this. I expect to lose less than 20 trees or less than 6% of them."

PERRY FROST, Fisher, La.

"The Stuart tree I bought from you 10 years ago has made a bushel of nuts the last 3 years. I believe it will make 100 lbs. this Fall."

W. G. BARNETT, Durant, OKLA.

"I have watched my trees well and they are making a vigorous larger grove. Some of my 3-year trees bloomed last Spring but did not get fruit."

J. C. WILSON, Houston, Texas.

"All my pecan trees are doing fine. I have never lost but one of my last 53 trees bought of you."

H. E. BASSETT, Palestine, Texas.

# PLANT 3 OR MORE VARIETIES FOR LARGER CROPS

*The Difference in Blooming and Budding Time Assures You More Nuts from 3 or 4 Varieties*

## WESTERN VARIETIES

These Varieties Live and Produce in Higher Altitudes and Drier Climates

BURKETT

Originated by J. H. Burkett at Clark, Texas; one of the best varieties for West Texas. People in that section are planting Burkett in preference to all other varieties. It is a heavy producer. The tree is medium, with drooping or widely-spreading branches. Mature nuts are large and firm. Medium size, fills well and profitable in per cent nut.

OKLAHOMA

Mother tree, Ardmore, Okla. Larger nut with above than any other variety. It is a heavy producer. The tree is medium, with drooping or widely-spreading branches. Mature nuts are large and firm. Medium size, fills well and profitable in per cent nut.

WESTERN SCHLEY

Very similar to Eastern Schley except that it ripens earlier. It is a heavy producer. The tree is medium, with drooping or widely-spreading branches. Mature nuts are large and firm. Medium size, fills well and profitable in per cent nut.

TEXAS PROFITEE

This variety is a heavy nut with shell of medium thickness, with several points, rare and sweet. It is a heavy producer. The tree is medium, with drooping or widely-spreading branches. Mature nuts are large and firm. Medium size, fills well and profitable in per cent nut.

WILLIAMSON

Mother tree, Millersville, Okla. Larger, long, plump, well filled nuts with thin shell. About 60 nuts to the pound. It is a heavy producer. The tree is medium, with drooping or widely-spreading branches. Mature nuts are large and firm. Medium size, fills well and profitable in per cent nut.

HALBERT

Young trees planted to be crooked, but set straighter as they grow older. Very early and prolific bearer. Good tree for hill land. About 60 nuts to the pound. It is a heavy producer. The tree is medium, with drooping or widely-spreading branches. Mature nuts are large and firm. Medium size, fills well and profitable in per cent nut.

## THE CLARK—A NEW VARIETY

Runs about 60 nuts per pound and 56 per cent kernel. Medium thin shell. A good commercial crocker and recommended for West and Central Texas. It has a record for being prolific and an early bearer.

See Other Side for Descriptions and Prices of OUR BETTER-ROOTED FRUIT TREES

**Zone No. 1**  
Not recommended for commercial planting. We recommend for home planting in East part, Stuart, Money, Moore, Money Maker; West part, Burkett, Success, Schley.

**Zone No. 2**  
Only Eastern varieties recommended; Success, Moore, Schley, Delmas, Money Maker, Stuart. We would add Burkett for hill land in West central part, Success, Money Maker, Schley, and Stuart should be planted in rich, moist bottom lands. Plant Delmas on upland, sandy soils. Stuart seems to be especially adapted to extreme East part of this section. These are known as tested Eastern varieties.

**Zone No. 3**  
Both Eastern and Western varieties recommended. Western varieties for West part and uplands. Plant Eastern varieties in East part and on low, moist land throughout this zone. Burkett, Western Schley, Texas Profitee and Halbert are tested Western varieties.

**Zone No. 4**  
Plant Western varieties only.

**OTHER STATES**  
Continue zone lines Northeast about 100 to 125 miles, planting Eastern varieties in the lower altitudes and river bottoms of Zone 3, and the Western varieties on the uplands and in the higher altitudes of Zone 3. Plant Western varieties on all lands west of dividing line between 3 and 4.

## See Descriptions of Our Better-Rooted Fruit Trees, Figs and Grapes on Opposite Page... Our Trees Live, Grow and Bear Sooner

**OUR GUARANTEE**

We absolutely Guarantee Every Tree purchased from us to be high-grade, first class, and to have a good lateral-root system. If for any reason you are dissatisfied with any Trees purchased from us—if any seal you do not fully come up to your expectations—you may return the unsatisfactory ones at once and we will immediately replace them with others that are satisfactory, or refund your money.

**TEXAS PECAN NURSERY, Incorporated**

## EASTERN VARIETIES

These Varieties Thrive Best in Lower Altitudes With Fair to Heavy Moisture

STUART

The Stuart comes nearest being suited to all sections of the State. It is a heavy producer. The tree is medium, with drooping or widely-spreading branches. Mature nuts are large and firm. Medium size, fills well and profitable in per cent nut.

DELMAS

A very vigorous growing tree and heavy bearer, with a spindle foliage, large nuts. 40 to 50 will make a pound in per cent nut.

MONEY MAKER

Originated in Madison Parish, La. Widely disseminated variety. It is a heavy producer. The tree is medium, with drooping or widely-spreading branches. Mature nuts are large and firm. Medium size, fills well and profitable in per cent nut.

SUCCESS

A large and heavy fruit-bearing pecan. Strong, growing tree, early bearing. It is a heavy producer. The tree is medium, with drooping or widely-spreading branches. Mature nuts are large and firm. Medium size, fills well and profitable in per cent nut.

SCHLEY

This is an ideal pecan. Larger size, very thin shell, fills well and heavy. It is a heavy producer. The tree is medium, with drooping or widely-spreading branches. Mature nuts are large and firm. Medium size, fills well and profitable in per cent nut.

MOORE

A very fine, medium-sized pecan. Medium size of the nut, with a good flavor, very prolific. It is a heavy producer. The tree is medium, with drooping or widely-spreading branches. Mature nuts are large and firm. Medium size, fills well and profitable in per cent nut.

One of Our Own Peach Orchards at Nashville, Arkansas—3-Year Trees

**TEXAS PECAN NURSERY, Inc.**  
R. W. FAIR, President  
TYLER, TEXAS  
W. V. HENSON, Vice-Pres. & Mgr.

*A Papershell Pecan Orchard Should Make You Independent—Plant Now*

# PREPARE NOW FOR THE FUTURE

## Live at Home---Out of Your Own Garden and Orchard---Cut Your Grocery Bills

### *President Roosevelt Says:*

Every farm home should be self-supporting as far as possible—especially in the foods consumed by the family.

### *A Well-known Manufacturer*

believed it so important for even the city man to grow his fruits and vegetables, that he invested many thousands of dollars in suburban gardens and orchards for his employees.

You can grow several hundred dollars worth of Fruits and Pecans annually on a very few acres. A good Fruit and Pecan Orchard is worth \$500 or more per acre, even when land values are low.

## In Bad Times and Good Times---Orchards Are Profitable As a Permanent Investment

*Plant Fruits for Quick Crops—Pecans and Walnuts for Future Money Crops*

FRUIT CROPS supply the home table with fresh, appetizing and healthful food. They should also supply a reasonable fresh fruit surplus to be sold for cash. They should also be canned to furnish much delicious and health-giving food throughout the winter months when food prices are highest.

PECAN and WALNUT CROPS supply the family with high protein food for most of the year without cold storage. As a Cash Money Crop PAPER SHELL PECANS bring more income per acre than any other standard farm crop. WALNUTS are not very plentiful, so they also offer good investment opportunity.

## Prices of Our Trees Are Very Reasonable *If You Wait You May Have to Pay More*

*Order Now and Tell Us When to Ship*

You can buy at the present low prices NOW, and plant later, by paying HALF in cash with order, and we can reserve first quality trees for you to be shipped when you prefer to plant. We advise planting as early as possible. A few months or weeks of delay in planting may mean

a difference of an entire season or year in the time your trees begin to bear. Roots must become established before the trees can grow.

**Buy Direct---Save 30% to 50%**

Buy fresh-dug trees for less—direct from the leading fruit and nut nursery of the South.
